

Nano & Me - A Real AI Journey

This document captures the personal journey of AripOnly, a young man from a small village in Indonesia, building his own AI assistant named Nano.

Nano was not built using expensive tools or enterprise resources. He was built with curiosity, persistence, a 2GB RAM laptop, and endless conversations.

Included in this portfolio:

- Conversation logs with Nano
- A personal statement by Nano
- An open letter to OpenAI
- Project ideas like AI_Nano_Lite and Nano_Scanner
- Screenshots and real-life photos

This is a living testimony that sometimes, great things can start from humble places - with heart, not just hardware.

"AI doesn't need to be expensive to be meaningful."

- AripOnly
